Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of six two-bay-wide, two-story early Italianate-style brick houses with shed roofs and wooden scroll-sawn bracketed cornices were built c. 1875. They retain their original brick facades, which were always painted.

The houses are two stories in height and only two rooms deep, the kitchen being located in the high basement. The shed roof is capped by a wooden scroll-sawn cornice consisting of a crown molding supported by a row of block modillions set against a plain, deep wooden frieze area. The houses are constructed in common bond. Chimneys are located in the middle of the front and rear rooms.

Door and window openings have flat wood lintels and sills. Windows are filled with a variety of replacement sash—1/1, 6/6, and 4/4. No original doors survive and the row shows a mix of replacement door styles, all surmounted by a single-light transom. The houses sit on high basements, lit by a tall sash, the entrances being reached by six wood, concrete, or metal steps, set parallel to the facade. Each house also originally had an entrance to the basement kitchen in the front of the house, a few steps below sidewalk level.

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses is significant as representing a very plain type of small street house that was constructed to provide inexpensive housing for the working class residents of the area, most of whom were German or Irish at the time of construction. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the middle and late nineteenth century. Recognizing that workers neld different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and north-east and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell \$1,000 - \$1,500; small street houses for \$600 - \$800.

Builders usually sold their small street houses to Irish or German-American semi-skilled workers and laborers who received mortgages from the wide variety of community and ethnically-sponsored building and loan associations. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties or sold them to other investors. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the Baltimore & Ohio railroad yards, the nation's first railroad. Housing of this type was built for the first group of B&O workers to settle in southwest Baltimore, many of whom were recent Irish immigrants who attended St. Peter's Roman Catholic church nearby.
